

PROFITEL IP

Weatherproof IP Telephone

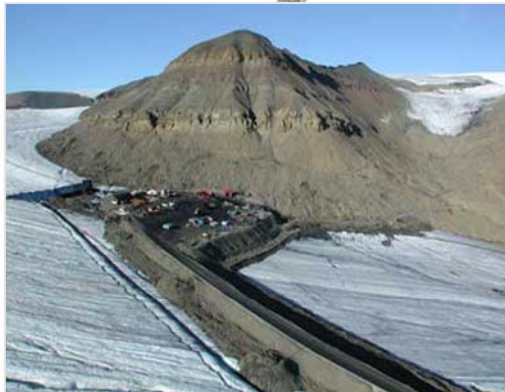

More than just a telephone !

Profitel IP is more than just a telephone, it is a complete communication system designed for harsh environment. It can be installed in any existing IP environment and be used as a telephone system, a gateway to analog telephones, a PA system and to collect local data for control purpose.

Profitel IP telephone unit is available with or without keypad, as handsfree, hotline or with push buttons. The modularity of the systems makes installation and maintenance easy; just swap the fascia in case of damage or failure.

It can create a complete redundant fiber optic IP network using the integrated switch (NET option) in case no IP infrastructure is available. In this case the telephone could act as a connection point for other IP based equipment like surveillance cameras, PLC's, measuring equipment etc. Profitel IP is compatible with Hirschmann HiPER Ring and can be installed in the same ring as Rail switches, MICE and MACH 3000.

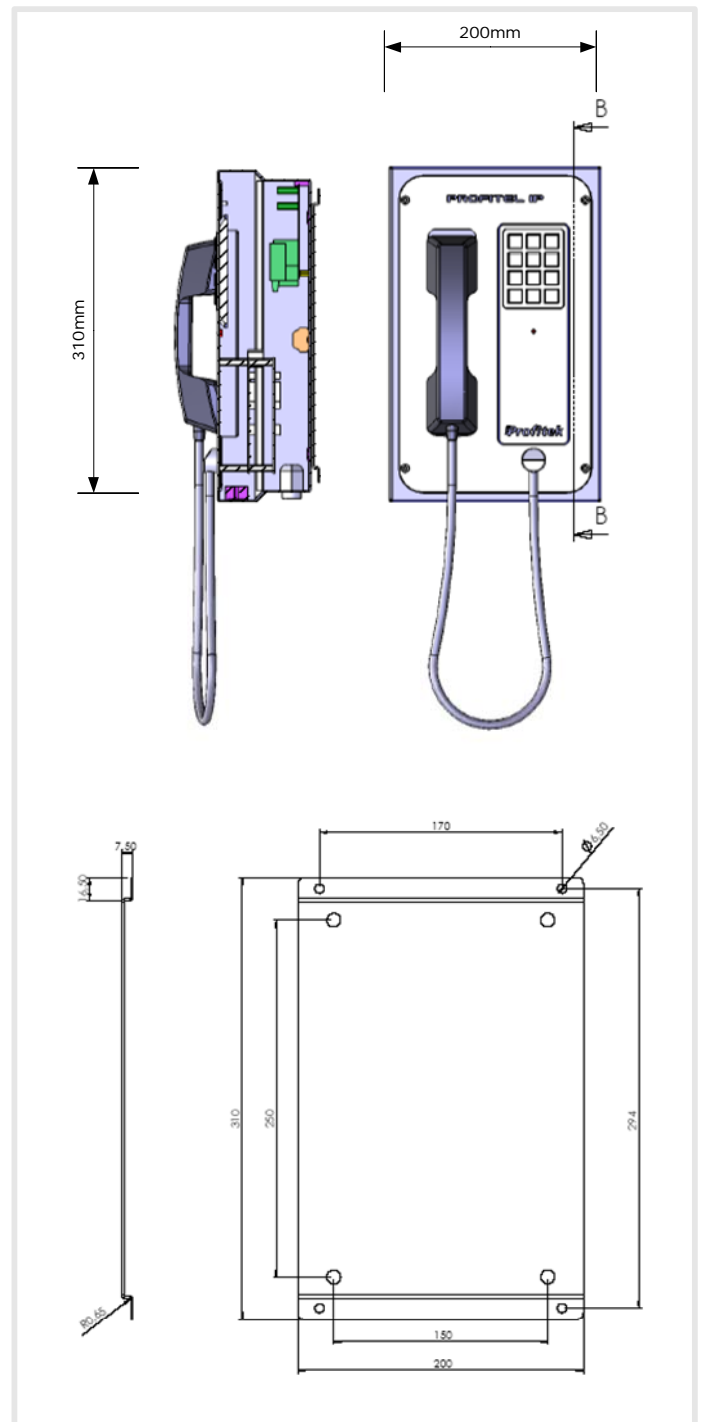

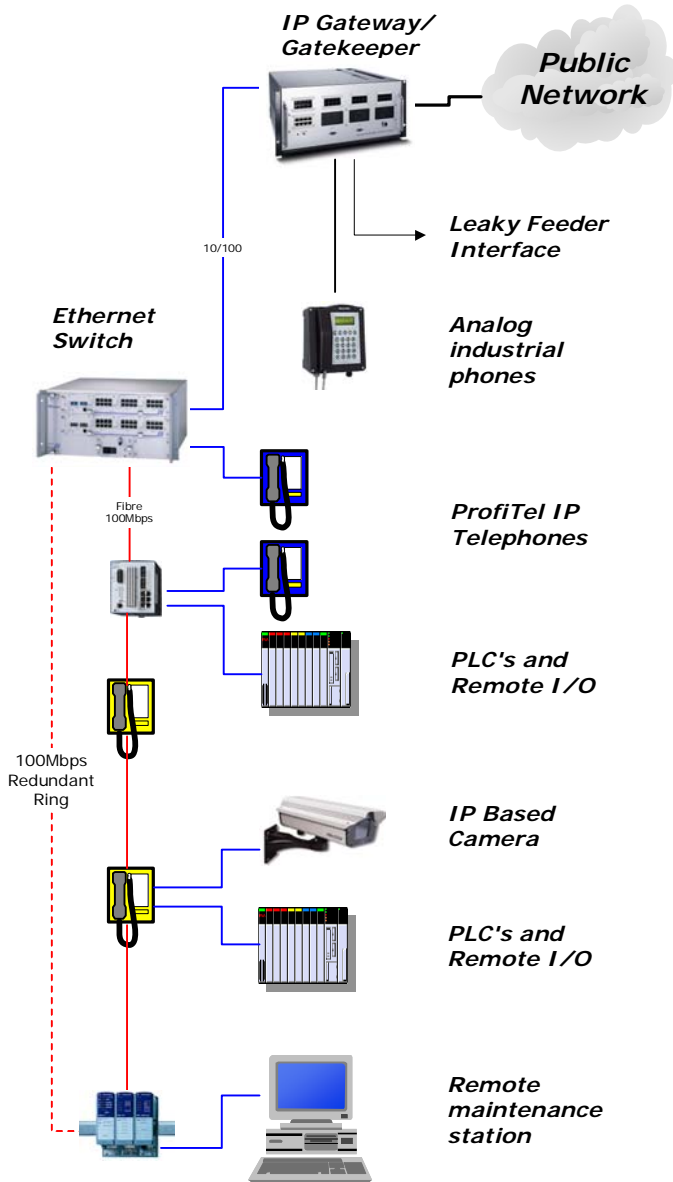

Profitel IP is remotely manageable and can be tested and configured from a central location. This is a significant contribution to efficient maintenance and reliable operation.

From mine to railway...
